

Instructions to config API

Purpose of this document

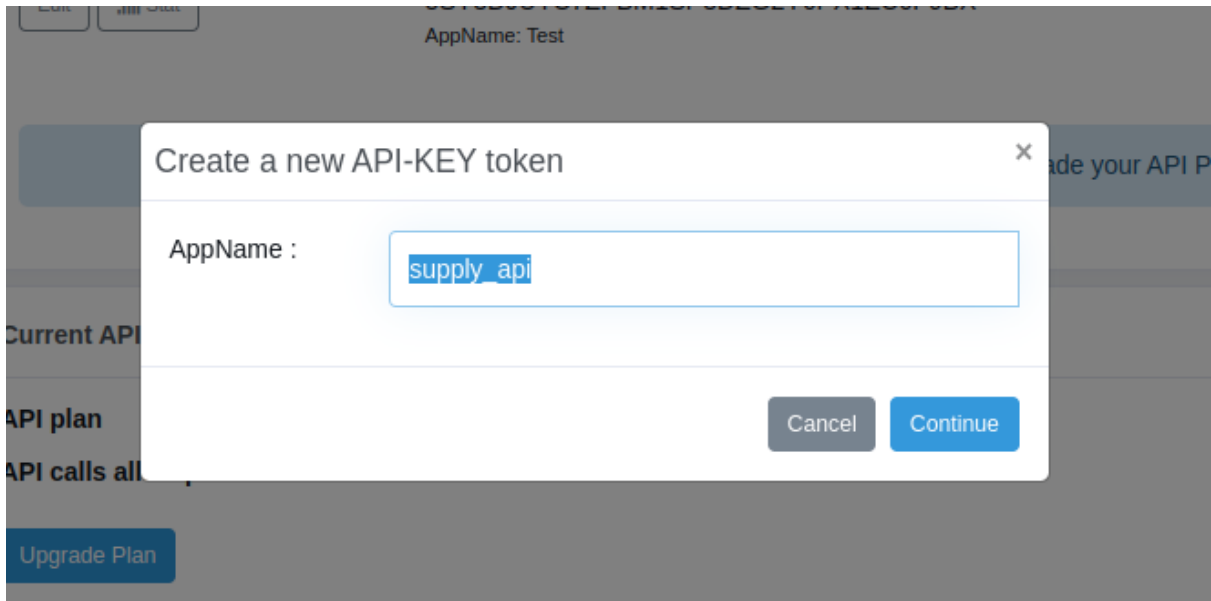

The purpose of this document is to document how to get the bsc scan **API KEY**. We will need this api key to request information from BSC SCAN.

Get your API KEY

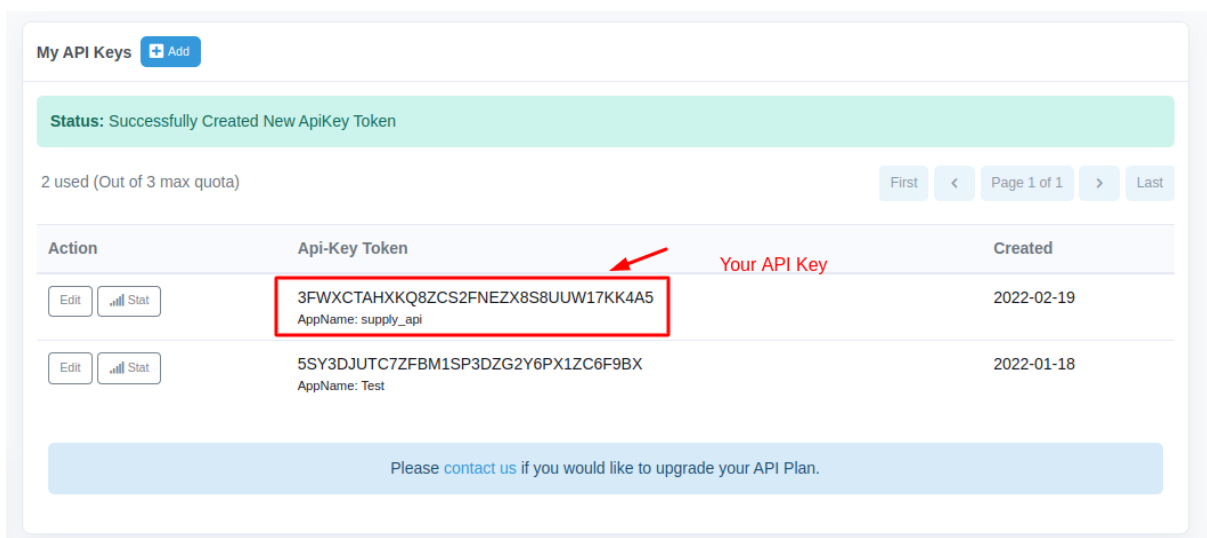

1. Go to <https://etherscan.io/>
2. If you don't have an account, [create a new account](#) and login.
3. Go to API Keys in the menu or click [here](#).

4. Click on the button Add to create a new API Key.
5. Input any name that you want and click continue. For example **supply_api**

6. Now you can see your created API Key, copy it.

7. Copy and paste your api key to the src/controllers/api.ts
Must look like this:

```
1 import { Application, Request, Response } from "express";
2 import { BigNumber, ethers } from "ethers";
3 import fetch from 'node-fetch';
4
5 // You must put your API KEY of ether scan here.
6 const key: string = "CIANIPEHWQPCMY19IWUMQAXAC84Y3F9MU7";
7 // You must put your token address here.
8 const tokenAddress: string =
  "0xca5ad03ce960c0ef8954999cc3b0983c68c7ba8a";
```
